

Dear FRONIUS IG Configuration Tool User,

Thank you for your interest in FRONIUS products and software.

This file is intended to help you install and operate the FRONIUS IG Configuration Tool. To copy this and use the Configuration Tool independent of the internet, follow these steps:

1. Create a new folder.
2. Extract all of the files from the .ZIP download into the new folder.
3. [Optional Step] To create a shortcut, right-click on the "Fronius IG Configuration Tool.html" file and select "Create a Shortcut". This can be Cut and Pasted to your Desktop, Programs menu, or elsewhere for easy access.
4. Open the Configuration Tool by double-clicking the "Fronius IG Configuration Tool.html" file or the shortcut to this file.

We wish you much success in using the Configuration Tool, and encourage you to download the .ZIP file every so often to update the .html file with a newer version. This will allow you to maintain the most up-to-date version with the most current modules and FRONIUS IG inverters on your computer. To make sure you have the most recent version, look at the version number in the bottom-right corner and compare this to the version available on the Fronius Website.

*Disclaimer: The FRONIUS IG Configuration Tool was developed by Fronius to assist Users with system designs but does not guarantee the configuration is appropriate for your use. By using the FRONIUS IG Configuration Tool, the User assumes all responsibility for the accuracy and validity of the results including, but not limited to, system design, performance, and code compliance. It is incumbent upon the User to verify that the system design will meet their site-specific needs and all local codes.*
